* The liquid cleaner in the bottle contains water. A standard flashpoint test on the liquid product is terminated at 212°F when the water begins to boil and is converted to steam that extinguishes the test flame; consequently, the product is not regulated as a flammable liquid by the US DOT for highway shipment or by IATA for air shipment. The packaging material (a polyethylene container, paper label, and corrugated carton), however, is considered combustible; consequently an extinguishing media suggestion is made in Section IV.
